How It All Started

ATN International is migrating its compute infrastructure to AWS through the AWS Migration Acceleration Program (MAP). This program offers substantial financial incentives to streamline migration for organizations. The potential financial benefits for enterprises like ATN are significant. Nonetheless, the migration process is complex, and navigating the intricacies of adhering to AWS program requirements presents challenges.

On Their Own

At the outset ATN quickly realized that better visibility into its MAP environment and a clearer grasp of MAP contract tagging requirements were essential. The MAP migration journey is marked by complexities that are inherent to complying with the AWS contract requirements. ATN found itself in the unenviable position of not knowing what it did not know. As John McCallister, Head of Service Infrastructure at ATN noted, "I knew we were forfeiting

"MAP Manager is very impressive. It is straight forward and super easy to use. My favorite feature is the way it gives me a bird's eye view so I can simply click the resources that need remediation, and they are fixed. It's that simple."

John McCallister, Head of Server Infrastructure at ATN

money every quarter due to incomplete tagging of our MAP resources." The initial lack of awareness led to frustration and expended effort, prompting the realization that a more effective approach was needed.

Cloudsaver

Help Was Just a Connection Away

Recognizing its need for expert guidance, ATN reached out to Cloudsaver, which introduced them to Cloudsaver's SaaS solution, MAP Manager. This robust solution stands unrivaled in swift resolution of MAP Migration tagging issues, ensuring precise tagging of all resources to meet AWS MAP program requirements. The seamless integration process facilitated by MAP Manager enabled ATN to quickly gain insight into its MAP contract environment and embark on a clear path toward full compliance. Prior to MAP Manager's implementation, ATN spent six months to correctly tag 5,100 MAP contract resources. Within a couple hours, using MAP Manager, ATN proficiently tagged another 2,574 resources, bringing them to 99% compliance.

Onboard with Ease

Connecting ATN to MAP Manager was a streamlined process that demanded minimal effort, thanks to its user-friendly interface. Upon connection, ATN gained immediate visibility into its AWS MAP contract environment. Often, clients are uncertain about where or how to begin, but the MAP Manager dashboard provides a clear overview of the client's status and necessary remedial actions.

The Dashboard Says it All

The MAP Manager dashboard precisely identified each of ATN's resources and outlined necessary actions. A total of 4,400 actions for ensuring compliance were clearly identified. The display helpfully categorized resources into two groups: MAP contract eligible and ineligible resources. The dashboard's informative display highlighted accurately tagged, incorrectly tagged, and untagged resources, along with ineligible resources such as those created outside the MAP contract period. Alert icons spotlighted resources that required attention.

> *Much of the tagging remediation was successfully accomplished in a couple hours over a single weekend...*

No More Guessing

Map Manager facilitated ATN's comprehension of correctly tagged resources versus those requiring remediation. Despite the complexity of the remediation process, Map Manager boasts remarkable features that enable both individual and bulk tagging fixes as well as tagging automation. The resources incurring cloud spend are highlighted so that remediation efforts can be prioritized. Notably, MAP Manager's ability to recommend appropriate tags for AWS compliance eliminated the need for client guesswork, enhancing efficiency.

MISSION ACCOMPLISHED

With this level of efficiency and efficacy, ATN was able to bring their MAP resources into compliance with their AWS MAP contract requirements in a matter of hours. Much of the tagging remediation was successfully accomplished in a couple hours over a single weekend, a tribute to MAP Manager's efficiency and ATN's dedication. John McCallister was quick to state, "MAP Manager has been incredibly beneficial. The way it easily applies tags is very impressive. I absolutely recommend this solution for anyone migrating to AWS through the MAP program." This rapid progress allowed ATN to optimize compliance with their AWS MAP contract.
