Origen Tech

CLIENT SPOTLIGHT

Sprint to AWS MAP Compliance

The Migration Decision
As a SAP VAR partner, Origen Tech chose to migrate a portion of its compute resources to Amazon Web Service (AWS) through the AWS Migration Acceleration Program (MAP). The complexity of the AWS MAP contract prompted Origen Tech to start with a smaller resource subset to evaluate the program.

Help is Just a SaaS Solution Away
At the outset, Origen Tech made significant progress, but full compliance proved to be a stubborn hurdle. It was clear that they needed a powerful ally to achieve 100% MAP compliance.

Origen Tech partnered with Cloudsaver to leverage MAP Manager, an exceptional SaaS solution known for its ability to provide visibility and rapidly resolve MAP resource tagging challenges. With MAP Manager Origen Tech quickly identified and tagged all 855 resources, achieving 100% compliance in an astonishing 7 minutes.

Origen Tech was pleased with the ease of onboarding and achieving full compliance, unlocking MAP incentives. This remarkable achievement has instilled confidence to move forward with the migration of additional resources through the AWS MAP program.

The Dashboard for Success
MAP Manager's dashboard proved instrumental in Origen Tech's journey to AWS MAP compliance. It offered a comprehensive overview of MAP tagging status and the steps required for compliance with the AWS MAP contract. Resources were categorized and alerts highlighted areas needing attention eliminating guesswork and enhancing efficiency.

What drove Origen Tech's success in MAP resource tagging was the dashboard's capacity to identify all eligible resource types, including more than 15, some quite obscure like Route 53, Security Hub, and CloudWatch log groups. Origen Tech had not tagged some resource types simply because they were unaware of their inclusion in the MAP program.

Origen Tech staff expressed their enthusiasm, saying that MAP Manager's user-friendly dashboard gave them great visibility into their compliance status. It was a game-changer.

> *Time to full compliance: 7 minutes*

Built in Efficiencies Get You All the Way There
The ability to tag multiple MAP resources in bulk proved invaluable, with MAP Manager prioritizing resources that incur cloud spend so they can be managed first.

Additionally, MAP Manager's Connection Health Monitoring feature provides alerts if the AWS connection is lost, enabling prompt re-establishment, a compliance safety net that further augmented Origen Tech's migration efforts.

Crossing the Finish Line
Origen Tech's success with AWS MAP migration fueled their plans to migrate additional workloads. Cloudsaver MAP Manager remains essential in ensuring swift and accurate MAP contract compliance. Origen Tech's journey to 100% compliance exemplifies the power of innovation and as the leadership at Origen Tech states, "demonstrates the importance of choosing the right tool for the job."
