Mapping the Cloudsaver Platform to the FinOps Foundation Framework

Four pillars of advanced solutions and core platform competencies deliver a complete cloud management solution.

The Cloudsaver Solutions

PLATFORM

The Cloudsaver platform enables holistic FinOps management of cost and usage data and resource metadata. With smooth connections and informative reports and dashboards you'll get comprehensive cloud management, all in one powerful tool.

ASSESSMENTS

Assess and monitor spending by tenant, resource, and client. Pinpoint resource-saving opportunities and compliance risks for timely remediation. Use the personalized score to gauges risk and progress, create historical tracking, and report cost savings.

COMPLIANCE

Ensure real-time cloud environment compliance through resource tagging and policy visibility within the native environment. Scale tagging operations in real-time for enhanced visibility, operational efficiency, cost management, governance, and security.

FINOPS

Assess current effectiveness and forecast future costs. Leverage multi-tenant capability, detailed invoice visibility, and AI-enabled cost forecasting to empower precise showback cost attribution, informed decision-making, and optimized financial management in cloud environments.

OPTIMIZATIONS

Identify and execute potential savings by addressing unused and underutilized resources. With multi-tenant, real-time visibility efficiently manage and rightsize resources for optimal cost and development efficiency.

FinOps Domain: Understand Cloud Cost & Usage

FinOps Capability	Cloudsaver Solution
Data Ingestion	Platform
Reporting & Analytics	Platform
Allocation	FinOps
Anomaly Management	Platform

The Cloudsaver Platform's data **ingestion engine** integrates and normalizes AWS cost data, usage data, and resource metadata, enhancing **data analysis and reporting**. Its advanced reporting tools provide actionable insights through customizable dashboards and reports. The platform's patented tagging technology ensures precise **cost allocation** for past and future expenses and can automate monthly invoice reconciliation. Additionally, it supports efficient cost redistribution for enhanced transparency and accountability. Real-time **anomaly detection** rapidly identifies and resolves potential cost issues.

FinOps Domain: Quantify Business Value

FinOps Capability	Cloudsaver Solution
Planning & Estimating	FinOps
Budgeting	FinOps
Unit Economics	FinOps
Forecasting	FinOps
Benchmarking	Assessments

The Cloudsaver Platform leverages AI-driven **forecasting** technology to enhance cloud cost **planning and estimation**. Its robust invoice management and **budgeting** capabilities allow for precise cost control and informed decision-making on cloud **unit economics**. Additionally, the platform supports cost optimization strategies through comprehensive **benchmarking** and savings assessments.

FinOps Domain: Optimize Cloud Usage & Cost

FinOps Capability	Cloudsaver Solution
Architecting for Cloud	Compliance
Workload Optimization	Optimizations
Licensing & SaaS	-
Rate Optimization	-
Cloud Sustainability	-

The Cloudsaver Platform's optimization and compliance solutions ingest real-time cloud resource metadata to provide detailed insights and actionable recommendations for **workload optimization**. By evaluating and setting optimization thresholds, Cloudsaver offers prioritized guidance for **effective cloud architecture**, applicable to both production and pre-production stages. The platform highlights opportunities that maximize value, considering both resource limitations and business priorities.

Cloudsaver

FinOps Domain: **Manage the FinOps Practice**

FinOps Capability	Cloudsaver Solution
FinOps Practice Operations	Platform
FinOps Assessment	Assessments
FinOps Education & Enablement	Platform
Onboarding Workloads	Compliance
Cloud Policy & Governance	Compliance
FinOps Tools & Services	-
Invoicing & Chargeback	FinOps
Interesecting Disciplines	Compliance

The Cloudsaver Platform is designed to enhance the management of FinOps practices through a suite of specialized solutions and features. It supports **FinOps practice operations** with "Shareable Views" for collaborative and transparent management, and offers regular, automated savings and compliance assessments for critical insights into cost-saving opportunities under **FinOps assessments**. The platform knowledgebase facilitates **FinOps education & enablement** by providing educational resources, while the AWS MAP Manager aids **onboarding workloads** by automating AWS MAP tagging compliance and reporting.

Cloud policy & governance is enhanced with platform capabilities that ensure proper resource tagging and management. Although there is no specific solution for **FinOps tools & services**, the platform provides a comprehensive cost allocation and showback solution for effective cloud cost management under **invoicing & chargeback**, and Tag Explorer supports **intersecting disciplines** by offering detailed tagging strategies to optimize resource management and policy enforcement. Together, these features demonstrate Cloudsaver's comprehensive approach to supporting and optimizing FinOps practices across various organizational needs.
